

FRANCIS ROLAND BISSAH

Quality Assurance & Backend Engineer

Ghana | 0256728245 | rolandbissah10@gmail.com | github.com/RolandBissah10

PROFESSIONAL SUMMARY

Quality Assurance Engineer with hands-on experience in manual and automated testing (Selenium, Selenide, Playwright, REST Assured, JMeter) and defect management in Jira, backed by a backend development background in Java and Spring Boot. Brings a developer's understanding of system architecture to testing, enabling faster root-cause analysis, clearer defect reports, and closer collaboration with engineering teams to ship reliable software.

WORK EXPERIENCE

Quality Assurance Engineer — AmaliTech Services GmbH, Takoradi

Nov 2025 – Oct 2026

- Strengthened release reliability and cut recurring production defects by driving manual and automated testing (Selenium, Selenide, Playwright, REST Assured, JMeter) across web applications.
- Accelerated developer turnaround time by delivering clear, reproducible defect reports in Jira, reducing back-and-forth and rework.
- Protected system performance and user experience by executing API tests (REST Assured, Postman) and load tests (JMeter) that surfaced bottlenecks before they reached production.
- Improved cross-team delivery predictability by actively contributing to Agile/Scrum ceremonies, aligning QA priorities with engineering timelines and business goals.

Back-End Developer — AmaliTech Services GmbH, Takoradi

May 2024 – Oct 2024

- Enabled the front-end team to ship features on schedule by delivering reliable, well-structured REST APIs in Spring Boot for the Graduate Training Program(GTP) Management System.
- Improved internal communication efficiency by designing and deploying a Java-based mail sender application that streamlined team messaging.

IT Support — Effia Nkwanta Regional Hospital, Sekondi-Takoradi

Sep 2023 – Nov 2023

- Safeguarded uninterrupted hospital operations by proactively monitoring and maintaining network infrastructure, ensuring reliable connectivity and secure user access.
- Minimized staff downtime by quickly diagnosing and resolving hardware, software, and network issues across the facility.
- Strengthened reporting accuracy and knowledge continuity by maintaining structured IT asset and incident records.

IT Support — Western Naval Command, Sekondi

Aug 2022 – Sep 2022

- Improved customer satisfaction by promptly resolving technical issues for staff and customers across mobile and digital service platforms.
- Ensured uninterrupted transaction processing by maintaining the reliability of core software systems supporting customer management.
- Extended equipment lifespan and reduced service interruptions by keeping computers, printers, and related hardware in good working condition.

SELECTED PROJECTS

Performance Management System

- Collaborated with the QA team to perform manual and automated testing using Playwright and Postman, catching defects and bottlenecks before release.
- Conducted structured design reviews, comparing Figma mockups against live implementations and acceptance criteria, to surface UI inconsistencies and role-based access control gaps.
- Authored formal Jira bug reports grounded in acceptance criteria language, improving defect traceability and speeding up developer resolution.

ServiceHub Application

- Executed manual and automated functional testing (Selenium, REST Assured), identifying defects ahead of release and improving overall product quality.
- Conducted performance testing with JMeter to uncover bottlenecks and validate application stability under load.
- Tracked and documented issues in Jira, improving cross-team visibility and accelerating resolution speed.

Sign Language Translator Application

- Contributed to backend API development within an Agile team, enabling core functionality for the translation application.
- Performed functional testing to validate API behavior and ensure accurate frontend/backend integration.
- Partnered with cross-functional team members throughout Agile ceremonies to align technical implementation with product requirements.

QA as a Service

- Built an AI-assisted web QA platform that automatically crawls target URLs, discovers pages and UI elements, and generates and executes tests to detect bugs, reducing manual QA effort.
- Designed a multi-tenant project architecture with team membership and role-based access, enabling secure, scalable collaboration across QA teams.
- Implemented HTTP session recording and automated reporting, giving teams clear, real-time visibility into test execution and results.

Smart Job Alert System

- Built a FastAPI-based job scraper that aggregates listings from target sources for real-time processing.
- Developed a matching engine that filters job listings against individual user criteria, improving the relevance of alerts sent to users.
- Implemented automated user tracking and notification delivery, keeping users informed of new opportunities without manual searching.

SKILLS

Testing: Selenium WebDriver, Selenide, Playwright, REST Assured, JMeter, Manual & API Testing, Defect Tracking

Programming: Java, Python, JavaScript, HTML, CSS, Spring Boot, Django, FastAPI

Tools: Jira, Git, GitHub, Postman, Kanban, Docker

CERTIFICATIONS

- AWS Certified Cloud Practitioner — AWS, 2024

EDUCATION

Bachelor of Technology in Information & Communication Technology Jan 2022 – Sep 2025

Takoradi Technical University, Ghana

ACTIVITIES & LEADERSHIP

- **Head Prefect, Nana Anaisie Memorial School**
Led student initiatives that contributed to improved BECE academic results.
Captained the volleyball team to an inter-school championship.
- **Member, Google Developer Student Club (TTU)**
Participated in tech events and collaborative projects fostering technological innovation.
